the transcendental turn of husserl's phenomenology has challenged philosophers and scholars from the beginning this volume inquires into the profound meaning of this turn by contrasting its kantian and its phenomenological versions examining controversies surrounding subjectivity idealism aesthetics logic the foundation of sciences and practical philosophy the chapters provide a helpful guide for facing current debates

from the preface to the revised edition since its publication in 2007 transcendental phenomenological psychology has been sold on every continent except antarctica and is in the collections of research libraries in north america europe and asia even so its presentation to the academic community rightly provoked many comments corrections suggestions and criticisms such input while mostly welcome provided the impetus to publish a revised edition a phenomenological explanation of human consciousness has long been sought in regions of psychology since the discipline was first carved out of philosophical concepts and theories about the human condition in its earliest years western psychology was faced with two possible directions for this explanation an empirical naturalistic approach along with physics and biology or a non empirical eidetic approach along with logic and mathematics edmund husserl took up the latter his phenomenological tradition of inquiry successfully spanned nearly forty years until

suddenly stopped and largely suppressed during the second world war this book recovers husserl s revolutionary approach toward the human sciences just as it was developed and just as it is presented for further study here the author systematically gathers what husserl calls the leading clues in the phenomenological method proper for a psychology of affective inner experience and then for the first time applies husserl s own methodology for introducing a phenomenological psychology in the transcendental register of human consciousness unlike contemporary phenomenological psychology in the existential register transcendental phenomenological psychology is presented as an eidetic non empirical act psychology in husserl s mature genetic phenomenology this novel approach takes in the full range of solipsistic and transcendental subjectivity in husserl s theories of human consciousness and follows husserl s lead in presenting phenomenological psychology as an applied geometry of intentional experience within a step wise theory of inquiry this book is unique in human science today not only in its presentation of the development and applications of husserl s key concepts for the discipline of psychology but also for introducing a psychology that could be intuitively grasped as self evidently valid wherever one s interest might lie
